EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Arles Taylor on 21 April 2008.

Please cancel without prejudice pending claims 1-78. Please add new claims 79-87 as set forth below.

79. (New) A method of screening candidate substances for an ability to modulate phosphatidylserine exposure on the surface of a platelet, the method comprising:

- (a) providing a test sample comprising a platelet voltage dependent calcium channel (VDCC) comprising a VDCC α 1 subunit polypeptide on the surface of a platelet, wherein said VDCC α 1 subunit polypeptide is selected from the group consisting of SEQ ID NO: 2 or SEQ ID NO: 4,
- (b) administering a candidate substance to the test sample, and
- (c) measuring the effect of said candidate substance on phosphatidylserine exposure on the surface of the platelet by determining a first level of phosphatidylserine exposure on the surface of the platelet before the administering step (b); determining a second level of phosphatidylserine exposure on the surface of the platelet after the administering step (b); and comparing the first level and the second level, wherein a difference between the first level and the second level

Art Unit: 1647

indicates the ability of the candidate substance to modulate phosphatidylserine exposure on the surface of a platelet.

80. (New) The method of claim 79, wherein the candidate substance is a polypeptide, an antibody, a nucleic acid, or a chemical compound.

81. (New) The method of claim 79, wherein the platelet expresses a nucleic acid molecule encoding the platelet VDCC α 1 subunit.

82. (New) The method of claim 81 wherein the nucleic acid molecule encoding the platelet VDCC α 1 subunit polypeptide is selected from the group consisting of SEQ ID NO: 1 or SEQ ID NO: 3.

83. (New) The method of claim 79, wherein said determining of phosphatidylserine exposure comprises contacting the platelet with an antibody comprising a detectable moiety, wherein the antibody binds to phosphatidylserine; and quantitating an amount of the antibody bound to the platelet, wherein the amount of the antibody bound to the platelet indicates the amount of phosphatidylserine on the surface of the platelet.

84. (New) The method of claim 83, wherein the detectable moiety is selected from the group consisting of a radiolabel, a fluorescent label, a chemiluminescent

Art Unit: 1647

label, and an enzyme.

85. (New) The method of claim 83, wherein the quantitating is by a method selected from the group consisting of radioactive detection, fluorescence detection, chemiluminescent detection, calorimetric detection, Western blotting, immunoprecipitation, and fluorescence-activating cell sorting (FACS).

86. (New) The method of claim 79 wherein the platelets are human platelets.

87. (New) The method of claim 79 wherein the platelets are porcine platelets.

The following is an examiner's statement of reasons for allowance:

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/28/08 has been entered.

New claims 79-87 above are based on and find support in the originally filed claims. Basis can also be found in the examples.

Art Unit: 1647

The Nichols Declaration filed 1/28/08 has been considered. It is agreed that the prior art of record to Kunzelmann-Marche et al. and Malouf et al. (US 2002/0165353 A1) would not anticipate nor suggest the method of claims 79-87. Kunapuli et al., Jin et al., Sage, Sun et al., and MacKenzie et al. are also made of record and are pertinent to applicant's disclosure. These references are disclosed and discussed in the specification. Those of ordinary skill in the art at the time of the invention did not attribute phosphatidylserine exposure on the surface of platelets to the action of voltage dependent calcium channels (VDCC). These references would not anticipate nor suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marianne P. Allen whose telephone number is 571-272-0712. The examiner can normally be reached on Monday-Friday, 5:30 am - 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Manjunath N. Rao can be reached on 571-272-0939. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
